

ELAB

A SOLUTION FOR FLAWLESS & PRODUCTIVE LAB OPERATIONS

What We Are:

CIS has been serving sugar industry with incredibly designed ERP Software for diversity of industries and businesses since 1988.

Being in relationship with some of the reputable sugar mills for more than two decades made us design solutions by understanding the norms and needs of the industry. Therefore, we always stay eager to introduce software that can make sugar industry's technical and business processes better. Now, we are proudly presenting an ultimate ELab solution, we have designed this software to keep lab operations of sugar industry under control and well-informed.

How ELab Can Make Big Impact on Business Growth?

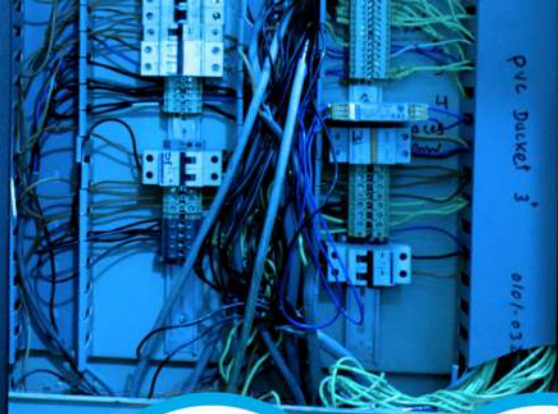

ELab is one of the utter most solutions from a range of CIS products that surely enhance the performance and competitiveness of sugar mill businesses.

ELab is a customized, cost-effective, and robust solution that keeps management informed regarding all the lab operations and no entries and reports can be manipulated. The software also helps lab workers to meet their work needs smartly. All in all, ELab is the most efficient and profitable solution sugar industry can own.

ELab deals with the sugar manufacturing processes that include raw material, production, and etc. The solution covers necessary calculations and procedures that are involved in producing sugar, various reports on sugar production, and factory performances.

With ELab, sugar mills can have most reliable recovery figures. Our solution will update recovery information automatically to the system, which cannot be changed or deleted in any ways and can be seen any time by the management. This impeccable feature and many others make ELab a must-to-have for sugar mills.

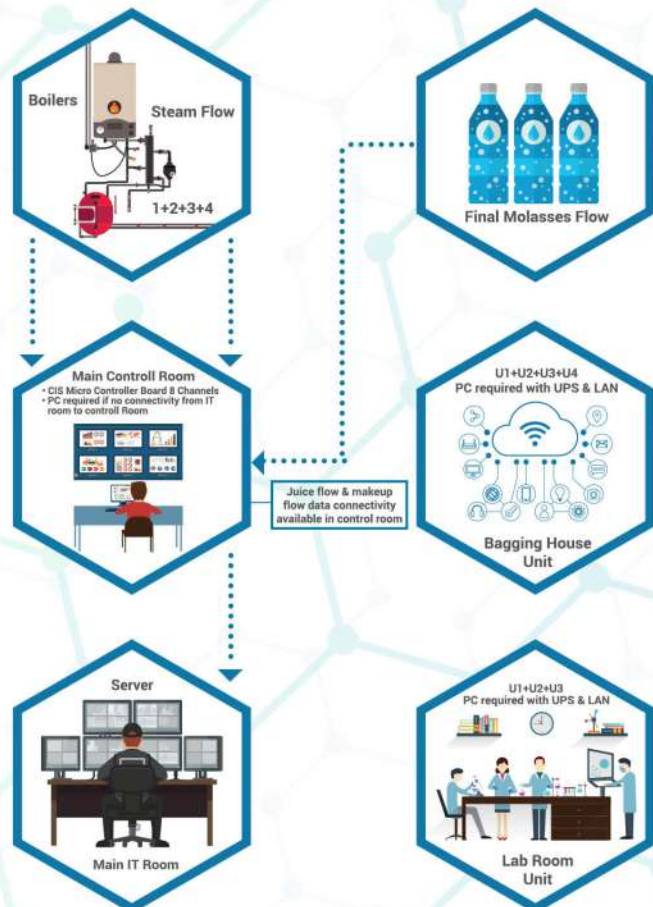

Your sugar business can get much efficient, time-saving, and organized when you have ELab running within your organization.

Facilities and Provisions of ELab:

Here, we have listed down some prodigious facilities of our solution:

- Reports include the efficiency of figures on a daily basis comparable with previous season.
- Daily process stock and recovery based on process stock.
- All lab equipment will get interfaced with mill's computers.
- Sugar bags counting will be done automatically.
- Sample lab results are integrated to the computer.
- Reports availability starting from the first crushing day till the last bag of sugar production.
- Recovery figures will be automated and no one can change them.
- Juice flow can be read automatically and it also gets saved.
- Cane crushing will be saved date wise.
- On dashboard, you can have clear figures for mixed juice, Molasses, yard balance, and etc.
- Bags production can be monitored date wise.
- Cane crushing data is easy to access and understand.
- You can keep perfect track of cane purchased with date wise graphical data.
- Management can get MIS reports with detailed entries of shifts, it will also have start and stop page timing mentioned.
